	DVANCED	IDICOD					
	A Challenge	in Chemistry JIPMER					
I	NGINEERING SOME BASIC CONCER	MEDICAL MEDICAL					
	SOME BASIC CONCEP	PT OF CHEMISTRY					
1	Which of the following is a chemical fertilizer?	13. The total number of electrons in 18 mL of water (density					
1.	(a) Urea (b) Sodium nitrate	= 1 g mL <sup>-1</sup> ) is					
	(c) Ammonium sulphate (d) All of these	(a) $6.02 \times 10^{23}$ (b) $6.02 \times 10^{25}$					
2.	Which one of the following is not a mixture?	(c) $6.02 \times 10^{24}$ (d) $6.02 \times 18 \times 10^{23}$					
	(a) Brass(b) Air(c) 22 carat gold(d) Water	14. A gas mixture contains 50% helium and 50% methane					
3.	1 mm Hg represents a pressure of	by volume. What is the percent by weight of methane in the mixture?					
0.	(a) $101.3 \text{ N m}^{-2}$ (b) $1013 \text{ N m}^{-2}$	(a) $19.97\%$ (b) $20.05\%$					
	(c) $133.3 \text{ N m}^{-2}$ (d) $1333 \text{ N m}^{-2}$	(c) 50% (d) 80.03%					
4.	The number of significant figures in $\pi$ are	1 1					
	(a) 1 (b) 2	15. If we consider that $\frac{1}{6}$ , in place of $\frac{1}{12}$ , mass of carbon					
_	(c) 3 (d) infinite Two oxides of a metal contain 36.4% and 53.4% of oxygen	atom is taken to be relative atomic mass unit, the mass					
5.	by mas respectively. If the formula of first oxide is $M_{2}O_{1}$						
	then that of the second is	(a) increase two fold					
	(a) $M_2O_3$ (b) MO	(b) decrease twice					
	(c) $MO_{2}$ (d) $M_{2}O_{5}$	(c) be a function of molecular mass of the substance					
6.	Which one of the following sets of compounds correctly	<ul><li>(d) remain unchanged</li><li>16. A person has as many notes as number of oxygen atoms</li></ul>					
	illustrates the law of reciprocal proportions?	in 24.8 g N Na <sub>2</sub> S <sub>2</sub> O <sub>3</sub> .5H <sub>2</sub> O (mol. wt. = 248). A note					
	(a) $P_2O_3$ , $PH_3$ , $H_2O$ (b) $P_2O_5$ , $PH_3$ , $H_2O$ (c) $N_2O_5$ , $NH_3$ , $H_2O$ (c) $N_2O$ , $NH_3$ , $H_2O$	counting machine counts 48 million notes per day. How					
7.	116 mg of a compound on vaporisation in a Victor	many days it would take to count these notes?					
	Meyer's apparatus displaces 44.8 ml of air measured	(a) $10^{12}$ (b) $10^{14}$					
	at STP. The molecular weight of the compound is	(c) $10^{16}$ (d) $10^{18}$					
	(a) 116 (b) 232	17. Volume occupied by one molecule of water (density = 1 g cm <sup>-3</sup> ) is					
8.	(c) 58 (d) 44.8 An element X has the following isotopic composition:						
0.	$^{200}X:90\%$ , $^{199}X:8.0\%$ , $^{202}X:2.0\%$						
	The weighted average atomic mass of the naturally	(c) $3.0 \times 10^{-23}$ cm <sup>3</sup> (d) $5.5 \times 10^{-23}$ cm <sup>3</sup>					
	occuring element X is closest to:	18. The mass of $2.24 \times 10^{-3}$ m <sup>3</sup> of a gas is 4.4 g at 273.15 K and 101.225 kBa measure. The gas may be					
	(a) 199 amu (b) 200 amu	and 101.325 kPa pressure. The gas may be (a) NO (b) NO <sub>2</sub>					
	(c) 201 amu (d) 202 amu	(d) $HO_2$ (c) $C_3H_8$ (d) $HH_3$					
9.	One litre of a gas is at a pressure of $10^{-6}$ mm of Hg at $25^{\circ}$ C. How many molecules are present in the vessel?	19. The total number of atoms of all elements present in					
	(a) $3.2 \times 10^6$ (b) $3.2 \times 10^{13}$	mole of ammonium dichromate is					
	(c) $3.2 \times 10^{10}$ (d) $3 \times 10^{4}$	(a) 19 (b) $6.023 \times 10^{23}$					
10.	If $10^{21}$ molecules are removed from 200 mg of CO <sub>2</sub> , then	(c) $114.473 \times 10^{23}$ (b) $84.322 \times 10^{23}$ 20. If 1 mL of water contains 20 drops, then number of					
	the number of moles of $CO_2$ left are	molecules in a drop of water is					
f nom	(a) $2.88 \times 10^{-3}$ (b) $1.66 \times 10^{-3}$	(a) $6.023 \times 10^{23}$ (b) $1.376 \times 10^{26}$					
11	(c) $4.54 \times 10^{-3}$ (d) $1.66 \times 10^{-2}$ 10 dm <sup>3</sup> of N <sub>2</sub> gas and 10 dm <sup>3</sup> of gas X at the same	(c) $1.673 \times 10^{21}$ (d) $4.346 \times 10^{20}$					
11.	temperature contain the same number of molecules.	21. Which has the maximum number of molecules among					
	The gas X is	the following? (b) $48 \times 6$					
	(a) $CO$ (b) $CO_2$	(a) $44 \text{ g of } \text{CO}_2$ (b) $48 \text{ g O}_2$ (c) $8 \text{ g H}_2$ (d) $64 \text{ g SO}_2$					
	(c) $H_2$ (d) NO	(c) $8 \text{ g H}_2$ (d) $64 \text{ g SO}_2$ 22. In which case is the number of molecules of water					
$ ^{12}$ .	How many moles of electrons weight one kilogram?	maximum?					
	(a) $6.023 \times 10^{23}$ (b) $\frac{1}{9.108} \times 10^{31}$	(a) 18 mL of water					
		(b) 0.18 g of water					
	(c) $\frac{6.023}{9.108} \times 10^{25}$ (d) $\frac{1}{9.108 \times 9.023} \times 10^8$	(c) $0.00224$ L of water vapour at 1 atm and 273 K (d) $10^{-3}$ mol of water					
		(d) 10 <sup>-3</sup> mol of water					
	ADDRESS :2/2-B, Kasturba Gandhi Marg.           POINT         Mob.: 98392	Near Mayonall Crossing, Kutchery Road , Prayagraj         206708, 9984889076					

# Some Basic Concepts of Chemistry

23.	Which one of the following is the lightest?		(a) 70 (b) 140
	(a) 0.2 mole of hydrogen gas		(c) 100 (d) 65
	(b) $6.023 \times 10^{22}$ molecules of nitrogen	34.	The percentage of Se in peroxidase anhydrous enzyme
	(c) 0.1 g of silver		is $0.5\%$ by weight (atomic weight = 78.4). Then
	(d) 0.1 mole of oxygen gas		minimum molecular weight of peroxidase anhydrous
	(e) 1 g of water		enzyme is
24.	50 ml 10 N $H_2SO_4$ , 25 ml 12 N HCl and 40 ml 5 N HNO <sub>3</sub>		(a) $1.568 \times 10^4$ (b) $1.568 \times 10^3$
	were mixed together and the volume of the mixture		(c) 15.68 (d) $3.136 \times 10^4$
	was made 1000 ml by adding water. The normality of	35.	The crystalline salt $Na_2SO_4$ . $x H_2O$ on heating loses
	the resultant solution will be:		55.9% of its weight. The formula of the crystalline salt
	(a) 1 N (b) 2 N		is
	(c) 3 N (d) 4 N		(a) $Na_2SO_4 \cdot 5H_2O$ (b) $Na_2SO_4 \cdot 7H_2O$
25.	A 0.1 M basic solution is required from $Ca(OH)_2$ which		
	is 40% ionized. Analytical molarity of $Ca(OH)_2$ should		(c) $Na_2SO_4 \cdot 2H_2O$ (d) $Na_2SO_4 \cdot 10H_2O$
	be	36.	0.1 mole of a carbohydrate with empirical formula $CH_{2}O$
	(a) 0.125 M (b) 0.25 M		contains 1 g of hydrogen. What is its molecular formula?
	(c) 0.4 M (d) 0.5 M		(a) $C_2 H_{10} O_5$ (b) $C_6 H_{12} O_6$
	25.3 g of sodium carbonate, $Na_2CO_3$ is dissolved in		(c) $C_4 H_8 O_4$ (d) $C_3 H_6 O_3$
	enough water to make 250 mL of solution. If sodium	37.	The most abundant elements by mass in the body of a

## Some Basic Concepts of Chemistry

	The gram equivalent of HCl now required for complete	KMnO <sub>4</sub> has different equivalent weight in the basic medium
	neutralization will be	than in the acidic medium. Hence, now a days, mole concept
	(a) 2 y (b) 3 y	is mole common and the concentrations of the solutions
	(c) $y$ (d) $y/2$	are generally expressed in terms of molarities, though some
65	The total ionic strength (total molarity of all the ions)	other methods like molality, mole fraction etc. are also
00.	containing 0.2 M CuSO <sub>4</sub> and 0.1 M Al <sub>2</sub> (SO <sub>4</sub> ) <sub>3</sub> is	used.
	(a) $0.5 M$ (b) $0.7 M$	73. The equivalent weight of Cu
~ ~	(c) $0.9 \text{ M}$ (d) $1.2 \text{ M}$	(a) will be same in CuO and $Cu_2O$
66.	If avogadro number ( $N_A$ ) is changed from 6.022 × 10 <sup>23</sup> to	(b) will be double in $Cu_2O$ than in CuO
	$6.022 \times 10^{20} \text{ mol}^{-1}$ this would change	(c) will be double in CuO than in $Cu_2O$
	(a) the ratio of the chemical species to each other in	(d) depends upon whether copper in pure or impure
	a balanced equation	74. The chloride of an element is found to contain 52.8%
	(b) the ratio of the elements to each other in a	chlorine. The equivalent weight of the element is
	compound	(a) 63.4 (b) 31.7
	(c) the definition of the mass in units of gram	(c) 47.2 (d) 18.7
	(d) the mass of one mole of carbon	75. A 40% hydrochloric acid is found to have a density of
67.	375 mg of an alcohol reacts with required amount of	1.20 g mL <sup>-1</sup> . The molarity of the solution is nearly
	methyl magnesium bromide and releases 140 mL of	(a) 11 M (b) 12 M
	methane gas at STP. The alcohol is	(c) 13 M (d) 14 M
	(a) ethanol (b) <i>n</i> -butanol	76. The molality of the above solution will be nearly
	(c) methanol (d) <i>n</i> -propanol	(a) 15.3 m (b) 16.3 m
68.	100 mL of a water sample contains 0.81 g of calcium	(c) $17.3 \text{ m}$ (d) $18.3 \text{ m}$
	bicarbonate and 0.73 g of magnesium bicarbonate. The	77. The mole fraction of hydrochloric acid in the solution
	hardness of this water sample expressed in terms of	will be
	equivalents of $CaCO_3$ is (Molar mass of calcium)	
	biacarbonate is $162 \text{ g mol}^{-1}$ and magnesium bicarbonate	
	is $146 \text{ g mol}^{-1}$	78. The volume of the above solution required to make 1.0
	(a) $10^2$ ppm (b) $10^4$ ppm (c) $10^6$ ppm (d) $5 \times 10^3$ ppm	L of 0.10 M HCl will be
	$(c) = (0^{\circ} nnm)$ $(d) = 5 \times (0^{\circ} nnm)$	(a) $5.6 \mathrm{mL}$ (b) $6.6 \mathrm{mL}$

DIRECTION. The answer to each of the following questions is a single digit integer, ranging from 0 to 9. If the correct answers to the question numbers A, B, C and D (say) are 4, 0, 9 and 2 respectively, then the correct darkening of bubbles should be as shown on the side:

- 83. The number of metalloids present in the following elements is tin, lead, arsenic, palladium, antimony, tungsten, bismuth, osmium, lanthanum
- 84. A temperature of 41°F when expressed in terms of degress centigrade will be
- 85. The prefix 'giga' represents  $10^x$  where x is

2022/

- 86. The number of significant figures in the value 0.000524000 is
- 87. Copper reacts with nitric acid to form copper (II) nitrate, nitric oxide and water. The number of nitric acid molecules in the balanced equation is
- 88. Silver (atomic weight = 108 g mol<sup>-1</sup>) has a density of 10.5 g cm<sup>-3</sup>. The number of silver atoms on a surface of

area 10<sup>-12</sup> m<sup>2</sup> can be expressed in scientific notation as

 $y \times 10^x$ . The value of x is:

89. Among the following, the number of elements showing only one non-zero oxidation sate is

O, Cl, F, N, P, Sn, Tl, Na, Ti

- 90. The value of n in the molecular form  $\text{Be}_n\text{Al}_2\text{Si}_6\text{O}_{18}$  is
- 91. A student performs a titration with different burettes and finds titre values of 25.2 mL, 25.25 mL, and 25.0 mL. The number of significant figures in the average titre value is
- 92. Reaction of  $Br_2$  with  $Na_2CO_3$  in aqueous solution gives sodium bromide and sodium bromate with evolution of CO<sub>2</sub> gas. The number of sodium bromide molecules involved in the balanced chemical equation is
- 93. If the value of Avogadro's number is  $6.023 \times 10^{23} \text{ mol}^{-1}$ and the value of Boltzmann constant is  $1.380 \times 10^{-23}$ JK<sup>-1</sup>, then the number of significant figures in the calculated value of the universal gas constant is
- 94. Three moles of  $B_2H_6$  are completely reacted with methanol. The number of moles of boron containing product formed is

Numerical Value Type Questions (In Decimal Notation)

For the following question, enter the correct numerical value, (in decimal-notation, truncated/ rounded-off to the second decimal place, e.g., 6.25, 7.00, -0.33, 30.27, -127.30) using the mouse and the onscreen virtual numeric keypad in the place designated to enter the answer.

95. The ammonia prepared by treating ammonium sulphate with calcium hydroxide is completely used by NiCl<sub>2</sub>.6H<sub>2</sub>O to form a stable coordination compound. Assume that both the reactions are 100% complete. If 1584 g of ammonium sulphate and 952 g of NiCl<sub>a</sub>.6H<sub>a</sub>O are used in the preparation, the combined weight (in grams) of gypsum and the nickel-ammonia coordination compound thus produced is (Atomic weights in g mol<sup>-1</sup> H = 1, N = 14, O = 16, S = 32, Cl = 35.5, Ca = 40, Ni = 59)

Assertion-Keason <u>TYPE I</u> DIRECTION. The questions given below contain DIRECTION. The questions and STATEMENT-2 (Reason). which ONLY ONE is correct. Choose the correct option as under:

- (a) Statement-1 is True, Statement-2 is True; Statement-2 is the correct explanation for Statement-1.
- Statement-1 is True, Statement-2 is True; Statement-(b)2 is NOT a correct explanation for Statement-1.
- Statement-1 is True, Statement-2 is False. (c)
- (d) Statement-1 is False, Statement-2 is True.
- 96. **Statement-1.** A single C<sup>12</sup> atom has a mass exactly 12 amu and a mole of these atoms has a mass of exactly 12 grams.

**Statement-2.** A mole of atoms of any element has a mass in grams equal to its atomic mass.

97. Statement-1. In a gaseous reaction, the ratio of volumes of reactants and gaseous prodeucts is in agreement with their molar ratio.

Statement-2. Volume of gas is inversely proportional to its moles at particular temperature and pressure.

	widely different ratios of copper and zinc.	100 (C)		109 (u)			
02	<b>Assertion.</b> The size of a degree on Fahrenheit scale is			( Cx //			
01	smaller than that on celsius scale.			1.0.1			
					1		
	<b>Reason.</b> When temperature on celsius scale reads $0^{\circ}$ ,				//		
~ ~	it reads 32° on Fahrenheit scale.				. 11		
.03	<b>Assertion.</b> The number 14.56 $\pm$ 0.01 has three			stry	. 11		
	significant figures.			5			
	<b>Reason.</b> Number of significant figures is total number			hemis			
	of digits except the last digit whose alue is uncertain.			12	11		
.04	Assertion. Gay Lussac's law does not follow from			10	//		
	Dalton's atomic theory.			1251	1		
	<b>Reason.</b> Dalton's atomic theory explains laws of				/		
	chemical combination by mass only.		/				
		Chal		0'//			
.05	<b>Assertion.</b> Average atomic mass of an element depends	Chall	len	2//			
	mainly on the heavier isotope.	Gilav					
	<b>Reason.</b> Average atomic mass is obtained by multiplyng						
	the atomic mass of the heavier isotope with its						
	fractional abundance.						
.06	<b>Assertion.</b> Both 106 g of sodium carbonate and 12 g of						
	carbon have same number of carbon atoms.						
	<b>Reason.</b> Both contain 1 g atom of carbon which						
	contains $6.023 \times 10^{23}$ carbon atoms.						
07	Assertion. Equivalent weight of a base						
01							
	= Molecular weight						
	Acidity						
	<b>Reason.</b> Acidity is the number of replaceable hydrogen						
	atoms in one molecule of the base.						
08	Assertion. Equal moles of different substances						
00	contain same number of constituent particles.						
	Reason. Equal weights of different substances contain						
	the same number of constituent particles.						
.09	<b>Assertion.</b> In a combustion reaction in the air, oxygen						
	is the limiting reactant.						
	Reason. Oxygen is present in limited amount (only						
	21%) in the air.
